

Roche Belgium Anderlecht

Project Data:

Interior design: IDEAL PROJECTS

Architect: STEIN VAN ROSSEM

ARCHITECTENBUREAU

Client: ROCHE BELGIUM

Built surface: 6 580 m²

Budget: private info

Realisation: 2015 - 2018

Project description:

Roche's office is now 30 years old. The interior also. The building allows for a thorough renovation and upgrades to them with a future resistance for the next 30 years. Following a research into the ambitions for the future, a workplace concept has been developed that works with semi open space combined with traditional and new ways of meeting. A big step for Roche where up to now everyone had their own room.

Although in the new floorplan everyone gets their own desk, stairs between the floors make it easy to get along. The ground floor is reserved for large meetings. Having a chat with your colleague is possible in one of the many cozy .

Semi-transparent separating elements give the open space a human size and a sense of feeling.

Commission of IRS:

- Structural engineering
- MEP engineering
- Durability
